SUMIT VERMA | LinkedIn| sumit.v@live.com | +1-647-200-5899

SUMMARY

- 13+ years of experience in architecting highly available, scalable, and fault-tolerant systems.
- Expertise in developing tech roadmaps aligned with business priorities and SOA.
- Led teams in building and integrating systems across AWS, GCP, and private clouds.
- Skilled in cloud lifecycle management and DevOps/IaC automation.
- Proven ability to drive customer engagements to design and finalize cloud architectures.
- Experienced in collaborating with cross-functional teams using agile methodologies.

CERTIFICATIONS

- HashiCorp Certified: Terraform Associate **07/24**
- AWS Certified Solution Architect - Associate **07/24**
- Google Cloud Platform – Professional Cloud Architect **06/24**
- FinOps Certified Engineer and Practitioner **01/24**
- Microsoft Certified: Azure Administrator Associate **01/22**
- VCP – Data-centre Virtualization **04/19**

PROFESSIONAL EXPERIENCE

Cloud Architect /DevOps & IaC Lead, CGI (Markham, ON) **05/22-PRESENT**

Key responsibilities:

- Lead client and vendor discussions to solution application migrations, achieving timelines reduction by 20% for overall solutioning and migration.
- Architected and maintained Terraform infrastructure, standardizing setups on GCP and AWS to improve code reusability within Business Unit by 60% and ensure code reliability.
- Streamlined CI/CD pipelines in Unified GitLab, boosting code deployment efficiency by 40% with automated approvals and reducing security incidents/alerts.
- Deployed monitoring and automation tools, reducing cloud consumption costs by 30% and enhancing resource utilization by 40% leveraging automated decommissioning, T-shirt sizing implementation, dynamic image building.
- Utilized a comprehensive technology stack, including GCP, AWS, Terraform, GitLab, and Ansible, to drive strategic initiatives, ensuring minimal downtime and maximizing system reliability and security.

Project 1: Network Mediation & Mobile Network Analytics

Role: Lead DevOps Engineer & IaC Architect | **Team**: 6+ Sr and Intermediate Engineers

Overview:

- **Design & Implementation**: Architected the migration of a Network Data Transformation application stack to GCP, converting functionalities into cloud infrastructure components.
- **Key Achievements**: Infrastructure as Code (IaC): Developed modular Terraform scripts for robust GCP service management, including GKE clusters, Compute Engine, BigQuery Datasets, routines and tables, CloudRun and Cloudfunctions, Serverless VPC connectors, Redis Memstore instances, Dataflow, DataCatalog tags and templates.
- **CI/CD Integration**: Established secure GitLab pipelines for automated deployments in both non-production and production environments.
- **Migration Excellence**: Led the 20TB database migration to GCP, ensuring minimal downtime.
- **Cost Efficiency**: Implemented FinOps practices and Infracost, optimizing costs with serverless solutions and automated scheduling.
- **Security and Compliance**: Developed OPA Rego policies, integrated OPA and KICS for policy and security scanning in GitLab CD pipelines ensuring compliance and system integrity.

Technology Stack: GCP, Terraform, GitLab, PowerShell, OPA, Shell Scripting, Apptio Cloudability and Infracost.

Project 2: Application Modernization Drive
Role: Cloud Lead
Objective: Transitioned from legacy systems to a modern, cloud-native architecture using AWS.
Overview:

- **AWS Integration**: Managed comprehensive AWS service deployment (Lambda, API Gateway, DynamoDB) to enhance functionality and agility.
- Cluster Management: Administered ECS and EKS with Terraform for auto-scaling and advanced security, maintaining 99.99% application availability.
- **Operational Efficiency**: Reduced operational costs by CAD $650K annually through strategic resource management and optimization.
- **High Availability & Backup**: Strategy Implementation: Developed a robust multi-AZ, multi-region AWS deployment, enhancing data protection and system reliability.

Technology Stack: AWS, Terraform

Project 3: Citrix Cloud Migration Initiative
Role: Cloud Architect
Objective: Solution and design multi-cloud alternate to the Citrix DaaS on-prem hosted solution
Migration Planning & Execution:

- Strategic Cloud Migration: Planned and executed the migration of 300+ XenServers, 3000+ VDA Desktops, and 300+ applications to Google Cloud

Technology Stack & Optimization:

- Tech Stack Utilization: Xen hypervisors, Citrix XenApp, GCP, Citrix Cloud, Terraform and Ansible

Project 4: Cloud Ops optimization
Role: Lead Architect | **Team:** 4 Sr. System Engineers
Objective: Identify process automation opportunities to reduce manual overhead, improve turnaround
Overview:

- Leveraging my experience in automation, led an initiative to introduce automation, reduce overhead, and improve SLAs and turnaround times. Developed and presented a proposal for an automation framework to CGI and client's leadership, conducting workshops to gather feedback and demonstrate achievable results based on use case data.
- Automated server patching for existing and newly provisioned Windows and Linux OS Instances (Count : 3100) both on-premise and GCP complete with Application power down and up (Database – Not included), Patching initiation and tracking and auto-updating JIRA Ticket
- **Technology Stack**: Integrating JIRA, GCP, VMware, SCCM, RedHat Satellite and Ansible Tower
- Reduction in 500 man-hours/week from Ops squad saving CAD 240K/month, Improved Patching SLA by 15%, reduce operational task duration by 2 hours per activity.

Additional Projects:

- Provided solutioning architecture and implementation guidelines for AKS cluster running client workloads to reduce the routable IP consumptions by consolidating 10 AKS Clusters with 5 nodes each to a Single cluster solution.
- Responsible for Infrastructure solutions in CGI RFI and RFP solution responses for Canadian Public Sector utilities for Azure centric solutions.

Lead Architect, HCL Canada (Mississauga, ON) **11/12 -05/22**
BlueYonder Inc - US Based Logistics SaaS Solutions company (Dec 2020 – May 2022)

- Led a team of 5 to architect an automation framework for incident remediation, infrastructure & application delivery leveraging Ansible AWX Automation.
- Delivered 10 ServiceNow catalogs automating backup and patching with AWS tools.
- Enhanced SLA compliance, resolving 1000+ incidents monthly.
- Saved 1200+ man-hours monthly, equating to $500K in annual savings.

Toyota Financial Services - US-based Automobile Finance Division (Dec 2019 - Dec 2021)

- Developed an automation stack using AWS, ServiceNow, Terraform, and Ansible.
- Reduced VM build time from 7 days to 8 hours, cutting outsourced team size by 80%.
- Created 15+ self-service ServiceNow catalogs to streamline user requests.
- Coordinated project kick-offs with pre-sales, internal teams, and vendors.

Estee Lauder Inc – New York based FMCG group (Jan 2018 – May 2018)

- Spearheaded the design and architecture of VMware vRealize Automation, incorporating Windows and Linux catalogs for both on-premises and single-region Azure data centers.
- Streamlined provisioning workflows to meet PoC SLA targets, resulting in an 80%+ reduction in deployment times.
- Unified and optimized resource management, ensuring consistent performance and reliability across hybrid environments.

Blue Cross Blue Shield - Chicago based Insurance Provider (May 2018 – Dec 2019)

- Designed and executed VMware vRealize stack for VM lifecycle automation and monitoring.
- Reduced infrastructure build time from 6 days to 10 hours.
- Integrated CI onboarding in ServiceNow with automated notifications.
- Implemented a Backup and Disaster Recovery strategy using VMware Site Recovery.

DnB - Norway State-Owned Bank (Mar 2014 – May 2016)

- Implemented HCL IP solution with PowerShell and shell scripting.
- Automated VM lifecycle processes, reducing timelines from 4 days to 8 hours.
- Updated CI on the CMDB as part of the automation process.

Internal Project- HCL CMP Platform (Dec 2012 – Apr 2019)

- Led a 3-member team for managing HCL's VMware Infrastructure for In-house product development.
- Managed VMware vSphere infrastructure, including VMs, networking, and storage.
- Upgraded and managed vCenter and ESXi hosts using VMware Update Manager.
- Utilized VMware vSphere, vRealize, NSX, Windows Server, and Active Directory.

Enterprise Engineer, Arvato Bertelsmann (Gurgaon, India) **01/11 - 11/12**

- Responsible for providing Tier-1 support for Acronis Backup and Recovery solutions to enterprise clients including bare-metal recovery, tape backup troubleshooting, agentless backup and recovery issues

EDUCATION

- Master of Computer Application, INDIA (Major: Computer Science)
